

Data-Ease

**Software Engineering [CS20006]
2018-2019**

WHY?

An Abstraction

1

DBMS Are Complex

A DBM system is not easy for everyday people to use and manipulate.

2

Limiting Roles

It is complex to manage different roles and limit access to sensitive data.

3

No Data Accountability

It is very hard to keep track of who are the users and what actions they performed.

4

Textual View

It is hard to operate with a textual interface that most systems come with.

Data-Ease(d)

Simple

Kept simple, with basic functionalities for everyday professionals.

Easy Config

Easy to connect via ConnString environment variable and secured via MD5 hash.

OS Independent

We've used Java which generates bytecode which is system independent.

Flexible

Fixes on already existing database; flexible role management

The Team*

Where's The Plan?

There's More To Planning

- Software Requirement Specifications:

<http://bit.ly/SE19SRS>

- Sequence Diagrams

- Login

<http://bit.ly/SE19LOGIN>

- Admin

<http://bit.ly/SE19ADMIN>

- User

<http://bit.ly/SE19USER>

- Logout

<http://bit.ly/SE19LOGOUT>

How We Board Users?

User Registers With The Application

User Can View, Visualize And Edit Tables

Admin Oversees And Approves

Admin Controls The Edits And Access Rights

Demo
02

Welcome In'

Less Input, Fast OnBoarding

WELCOME NEW ADMIN

Where Are We?

DBMS	Initiate Conn.	Prepared Statements	Migration
GUI	Registration And Login	Window Linking And Navigation	View Admin/User Info
Admin	Create/ Manipulate Tables	Approve/ Remove User	Monitor User
User	Enter / Add Data	View/ Retrieve Data	Verify / Report Data

Where's The Magic?

A **complex idea** can **never** be
conveyed, enough, **with** just **text**!

How To Make
Database
Platform
Independent?

How To
Bring Together
Beauty &
Functionality
With Limited Time?

THE CHALLENGES

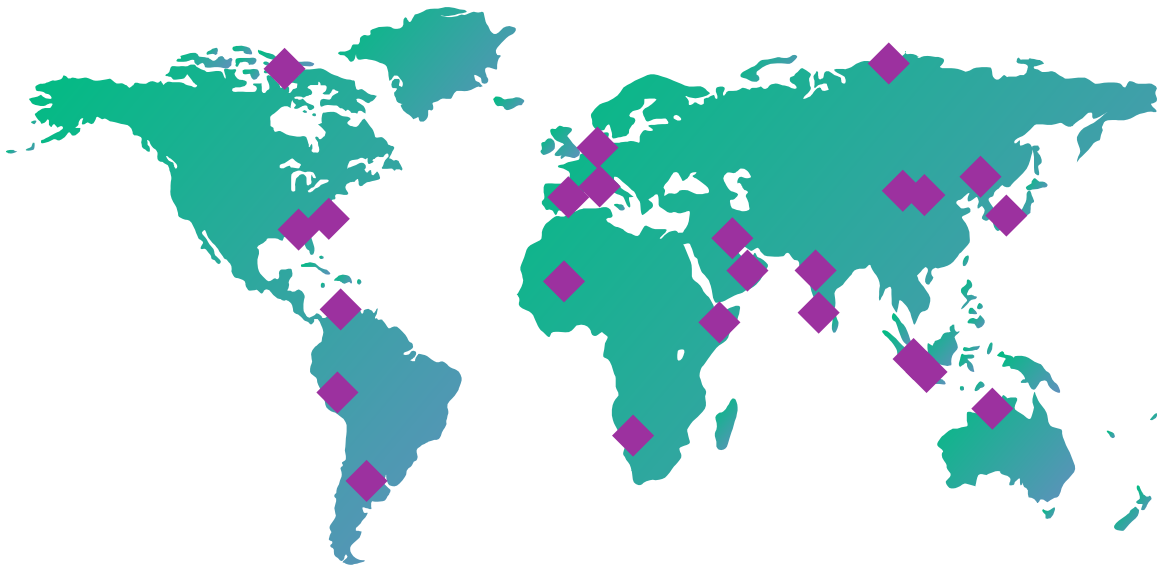

How To Make
Single-Point
Hassle-Free
Approval?

How To
Segregate
App-Specific
Database
From System?

Where We Thrive?

We Have Used The Following Environment
On Top Of Linux Operating System:

- Java Development Kit 8
- Java Runtime Environment
- Apache Netbeans IDE
- Java DataBase Connectivity
- Java Swing
- Java Script Pages (jsp)MyAdmin
